Appendix I: Authority Records
Appendix II: Cataloguing Policy
Appendix III: Definition of terms

1. Cataloging Services Manual of Procedures

1.1 Aim & Purpose

The aim of this manual is to emphasize the detailed procedures of all aspects of the cataloguing services duties and responsibilities in order to ensure that international high standards are met and maintained in terms of cataloguing and record management.

The Cataloguing services manual of procedures is compliant with the following policy document:
Cataloging Policy (Appendix II)

1.2 Scope & Applicability

These procedures apply to all library staff, with the sole responsibility of KU Library cataloguing team.

1.3 Definitions

Terms to be defined (Appendix III)

1.4 Review process

1.4.1 Document owner
1.4.2 Approval authority
1.4.3 Contacts

2. Cataloguing Services: Main Functions:

The cataloguing services aim is to fully catalog everything acquired under the Library's collection which consist of books, ~~periodicals,~~ maps, DVDs, CD-Roms, and multimedia kits to allow material visibility and efficient usability of the resources.

The Cataloging Department is responsible for:

2.1 The inclusion and maintenance of records in the Library catalog that provide information about available resources to the library users.

2.2 Describing and organizing the library resources to support the University's teaching and research activities by following international standards & tools:

- RDA (Resource Description and Access).
- Library of Congress Cataloging Service Bulletin, subject headings, classification, online catalog, rule interpretations, etc.
- MARC21 Bibliographic Format, Authority Format, Holdings Format and Code Lists for Countries and Geographical Areas
- Alma Cataloging User's Guide
- MARC Edit

- Khazendar
- Arabic Union Catalog

2.3 Entering and editing the third (i.e. full) level of description as defined in the rules of RDA.

2.4 A collection code is assigned to each physical item acquired by the library according to its format and scope, as follows:

General - the main body of the library's collection (consisting of books and disks), that are available for loan to students, faculty and staff.

Reference - works designed to be consulted when authoritative information is needed, rather than read cover to cover, e.g. dictionaries, encyclopedia and directories. (To be used inside the library only)

Online Periodicals—serial publications consisting of articles, reviews, etc., published at regular intervals usually in a numbered or dated sequence, e.g. journals, magazines and newsletters

Online Newspaper–serial publications containing news, editorial comment, advertising, etc that is usually issued daily, on certain days of the week or weekly.

Maps - two-dimensional graphic representations of geographical areas, normally done to scale, on flat or folded paper.

Reserve - materials given a short loan period (one-hour, three-hour, overnight, three-days, etc.) for a limited period of time (usually one semester) as per the request of the Faculty, to ensure that all students enrolled in a course have the opportunity to use them.

Leisure – recreational reading material for the KU community.

Multimedia- Typically a multimedia kit that includes a CD-ROM or DVD player, a sound card, speakers, and a bundle of CD-ROMs.

Special Collection:

- Emirates collection: Special collections for the UAE.
- Medical Collection: Medical, nursing and all related groups.
- International
- Archive
- Popular Science
- Children's Collection

Type of Cataloging:

- **Descriptive Cataloging** - Applying a standardized set of rules to record the title, authorship, and publication data for a work. Describe the physical extent of the work, add bibliographic notes as necessary, and add access points for persons or entities associated with the creation of the work.
- **Subject cataloging** - Subject Heading is defined as the most specific word or group of words that captures the essence of the subject or one of the subjects of a book or other library material selected from a subject-heading list containing the preferred subject access terms (controlled vocabulary) and assigned as an added entry in the bibliographic record, which works as an access point and enables the work to be searched and retrieved by subject from the library catalog database.
- **Search Resource** : is a computer-to-computer communications protocol designed to support searching and retrieval of information in a distributed network environment. The **Search Resources** standard continues to evolve to meet the changing needs of information creators, providers, and users.
- **RDA**- Resource Description and Access, Khalifa University implements rules of the RDA.
- **Horizon, Symphony and Koha** are the old Integrated Library System (ILS).

2.5 Routinely undertake database maintenance of the library's online catalog, it involves checking authority records for accuracy and consistency and removing any duplication, in addition to adding locally established records.

2.6 Working very closely with the Systems librarian and Acquisitions Department for the smooth running of the cataloguing process.

2.7 Ensuring consistency in the management of records.

2.8 Staying abreast of new technologies in the field and recommending justifiable implementations.

2.9 Assigning location codes to each physical item acquired as follows:
Main Campus Library – MA1 campus.
Habshan-SAN Campus – HAB-SAN campus.

3. Cataloguing procedures in ALMA (Integrated Library System (ILS))

3.1 Introduction

The cataloguing of Library resources is carried out through ~~an open~~ integrated library system (ILS) called Alma, and the updated catalogue record is instantly available for use via the Online Public Access Catalogue Primo search.). ALMA allows creating new records with all required fields according to RDA (Resource Description and Access) Most of the MARC records are supplied via the

established Book Vendors, and then loaded onto the Catalog. The records are either LC – Library of Congress records or Vendor records. Sometimes staff will download records via other utilities such as OCLC, local libraries, then add on to the Alma system as copy cataloging with local modifications when needed.

3.2 LC records

3.2.1 Start with a title search when it does not overlay the full bib record. Check with Acquisitions staff before going ahead with this.

3.2.2 When the full bib record is open in 'MDE (Metadata Editor)' task, check that the pagination (300$a) matches item in hand, as well as the ISBN (last few digits should be enough).

3.2.3 If there is no pagination on the LC record it probably means that it's a CIP (Cataloging In Publication) record that hasn't been upgraded. The full record is verified in case of any corrections needed.

3.2.4 In the leader, the Enc-Lvl is 4 (Core) or 7 (Minimal) then change it to [blank]. It usually means that the LC catalogers forgot to change the code.

3.2.5 Check that the Call# matches the spine label and that the barcode# matches the barcode label.

3.2.6 If it is a multi-volume set, check the item record carefully.

(For further clarification, please see Alma manual.)

Note: In case of any discrepancies in the record, coordinate with the Acquisition services to recheck with the vendor. Point it out to Acquisitions Librarian and show him/her the Vendor record as it appears in MDE (Metadata Editor).

3.3 Diacritics

The diacritic (usually a French accent or German umlaut, etc.) is interpreted by the computer as an Arabic letter, meaning that the whole field gets shifted to the right. In turn, this makes them a lot easier to spot.
Delete the whole field and copy-and-paste it from an OCLC record.

3.3.1 All files should be exported/imported in UTF-8 format.

3.3.2 Some of the old Horizon records had dodgy diacritics (because Horizon was not a fully Unicode system as Symphony, Koha and Alma are).

3.3.3 When a record with a dodgy Horizon diacritic shows up in Alma, it looks like this: (see 111 field.)

(For further clarification, please see Alma manual).

3.4 Creating Original MARC records

If you would like to catalog a record using a blank template in the basic editor

3.4.1 Click ! Metadata Editor' a record opened for editing in the Main Panel. Choose the framework you would like to base your record off (book, CD or DVD) after that insert all necessary information fields of the record:

020: ISBN
022: ISSN (if Serial)
040: Cataloging Source (NR)
041: Language code
050: Call Number (classification number, cutter numbers and date of publication)
090: local call number (For fiction, Children)
100: Personal Name
110: Corporate Name
240: Uniform Title (with translated books)
245: Title statement (Title, subtitle, author)
246: Varying form of title
250: Edition Statement
264: Publication (Place of publication, Name of publisher and Date of publication)
300: Physical Description
336: Content Type (R)
337: Media Type (R)
338: Carrier Type (R)
490: Series
500: General Note
504: Bibliography
546: Language Note
600: Subject-Personal Name
650: Subject-Topical
651: Subject- Geographic Name
700: Personal Name
830: Series
856: Electronic Location and Access

3.5 Copy MARC records

If you want to catalog a record based on an existing record at another library in the recently used editor (basic or advanced)

3.5.1 Click ‘Search Resources.’.

3.5.2 Search for the item you would like to catalog

Note

If no results are found, try searching for fewer fields, not all Search resources targets can search all of the fields above.

3.5.3 Search targets can be altered by using the Search resources Admin area.

3.5.4 From the results you can view the MARC or Card view for the records or choose to Import them into Alma .

- In addition to the Import link to the right of each title, you can click on the title you're interested in and marc record will preview the record and import it
- If you don't find the title you need in your Search resources search results you can click the 'Back to results and then Search Cataloging Profile' button at the top left of Search Resources menu.

3.6 Vendor records – cleaning up downloaded records

3.6.1 When you encounter an original record, it might be a bit short of fields and subfields. E.g. no 245$c, 300$b. No 5XX notes fields of any description, only one 650 and one 700.

3.6.2 It is best to search OCLC by ISBN and copy those fields from the best record(s) available if the search gives you nothing better than what’s already in Alma.
The OCLC record is the Vendor record.

3.6.3 Change your search title (possibly limiting it by publisher or year of publication) and you might get more results.

3.6.4 In column L of the OCLC results screen P =PCC pcc and B=British Library
(pccPCC=Program for Cooperative Cataloging, i.e. big research libraries that have been trained to do cataloging to LC’s own standard)

3.6.5 There is also code “C” for the National Library of Canada and another code for the Australian National Library (but their records may not have 050 field)

3.6.6 Choose the PCC record and add the necessary 245$a, 260$b and 504 as well as the added title 246 and the extra 650

3.6.7 Since Alma does not have the mechanism to check the indicators, the cataloguer need to check it himself E.g. when you add 650, the indicators will not show, record should have 650 _0.

3.7 Downloading MARC records from Gobi/Ebsco vendor server & saving on the share drive

When a new Vendor shipment arrives,

3.7.1 Go to their FTP site and grab the MARC file to save on Khalifa University server.

3.7.2 Copy the new MARC files from vendor server to the library share, TECHNICAL SERVICES-CAT folder, under subfolder FTP ftp-Vendor name and then by Vender FTP - Date and later by year "end of each year we combine all the files in one folder on yearly serial numbers"

3.7.3 After loading them into Alma ILS the word "done" is added to the file name as an indication that they have already been loaded.

3.7.4 Once the MARC files are on the library share drive, they can be loaded into Alma to match the incoming shipment, when all books have been received, go to the Acquisitions module.

3.7.5 The procedure for loading Gobi/Ebsco files is the same as the procedure used for importing files of Arabic records.
It is a two stage process as outlined in the Alma manual that involves MARC import (Utility module), the pre-set option in the Schedule Reports list (Reports module)

3.7.6 Go to Homepage > Acquisitions > Import.

3.7.7 Choose new order of physical Material GOBI-xml > press the three button 'function menu" >.Run > select the file you want to import for uploading.

3.7.8 Add > submit. your work will be imported into Alma and you can search for it to view.

3.7.9 To provide the summary of records that were just imported > click on the three button 'function menu' and choose Report, it will showed you the total records process and imported, record deleted total of holding /imported and total of items.

3.7.10 Click on Manage staged records. At this point, these records are resting in the reserve in Alma, the reserve Alma temporary holding. Only staff have access to these records, meaning patrons will not be able to access until the processing is complete.

3.7.11 A review of each marc record that was imported is possible by clicking on the title and click on import this batch into the catalog if all looks correct.

(For further clarification, please see Alma manual).

Note: Steps for downloading MARC records from the vendors are the same, the only difference is in the first stage when grabbing the MARC file from FTP site of the vendor's."

3.8 Adding copies

3.8.1 If an extra copy is added in a library location, go to the Bib record and click on the three button 'function menu' and choose items at the right bop of open screen choose add item. Fill it with the necessary information, such as scan the barcode, add the Collection and location code (usually "General Collection"),-material type and item call number type.

3.8.2 Anything other than that require the creation of a new Call Number before the item/barcode can be added. i.e. different volumes, different location both require the creation of a Call number record.

3.8.3 When printing spine labels for additional copies you need to choose the label template, this applies to locally purchased materials since resources received through the international vendors that would be shelf ready with the call number on the spine.

(For further clarification, please see Alma manual).

3.9 Continuations

There are two types of continuations:

- Yearbooks, e.g. EUROSLA yearbook
- Numbered series, e.g. "Advances in…"

If adding volumes to a series we already hold, there is no need for a new MARC record. The new volume is added to the existing "open entry" record.

In the example below, the libraries hold the EUROSLA yearbook for 2002, 2003, 2005, 2006, 2007 and 2010.

Just receive the gaps, i.e. 2004, 2008, 2009, and 2011.

Order records should not be deleted, as they hold information pertinent to the order date, requestor, budget, vendor, etc.

3.10 Deleting MARC records

All items *attached to the record need to be deleted first before deleting holding and the record (as a result both items and the bib will be removed as well) (For further clarification, please see Alma manual).*

3.11 Cataloguing (by type)

3.11.1 Multivolume works

These are 2 types:

- If all volumes are published and the title is completed then the bib record is "closed", or complete.
- If titles are not yet completed, then the bib record still has an open entry. You will see this in 300$a where the volume count is left blank, and in 260$c where the first year of publication is followed by a dash but no closing date. The call numbers for all the volumes take the year of first publication, even if the final volume was published many years later.
  Example: Title: *Index it right!* 2 vols with an original vendor record for each. In this case, upgrade the surviving record to include the fields from the OCLC record.

3.11.1.1 Need to add several fields/subfields/codes

3.11.1.2 We have added 245$c, 300$b, 504, 505 (important for multi-volume sets because it will help discover what each one contain) and any additional 650,700,710 fields.

3.11.1.3 Check the Primo display if you are not sure about how the record will look like. (The changes take effect straight away.)

Note the changes in the leader:

Enc_Lv	change from z to [blank]	=full level
Desc	change from [blank] to a	=AACR2 (RDA and ISBD are both coded "i")
Illus	change from [blank] to a	=illustrated
Cont	change from [blank] to b	=bibliography
Conf	change from [blank] to 0	=not conference
Fest	change from [blank] to 0	=not festschrift
Ind	change from [blank] to 1	=index
Fiction	change from [blank] to 0	=not fiction

(For further clarification, please see Alma manual).

3.11.2 Popular material (Fiction & Graded Readers) (Children's collection)

3.11.2.1 **FIC titles** have a full MARC record, the same as any other book. The only difference is in the call number and spine label. In the below example, a novel called *About face* is to be added to the collection record is imported through search resources from OCLC or others.

3.11.2.2 Edit and Save the found record.
3.11.2.3 Search in OCLC then capture, save and close.
3.11.2.4 When you open the record, you **only need to add** 090 FIC LEO.
3.11.2.5 If there is a 050 field present, you can leave it there. If there is no 050 field, you don't have to add one. Now go to add item.
3.11.2.6 Add the item with its barcode, and then change collection code "Popular reading" and Call Number to "FIC LEO MAI" *"Note: FIC= Fiction , LEO= Corresponds to the first 3 letters of author's surname and MAI= Standing for location, this example meaning (Main Library)".*

(Notice that the bib record 050/090 only has FIC LEO, whereas the Call No/Item has the location as well: FIC LEO MAI).
3.11.2.7 Save the record and close it.

Note: Graded Readers are to be revisited. The current procedure for Graded Readers is a full MARC, with an in-house devised call number. Example of a GR call number:

GR
Level 6
SHA

3.11.2.8 **Children's collection** will follow the same procedure of fiction collection in terms of searching and saving, the difference will be in writing the call number instead of FIC it will be CHI and the rest will follow FIC in writing the call no. Call number to follow the same rule as for Fiction. Example of a CHI call number:

CHI	Children's collection
SHA	First 3 letters of the authors surname
MAI	Main campus library

3.11.3 Multimedia
3.11.3.1 Do a title search for the item in hand
3.11.3.2 Search the catalog to locate the record and see whether there are any duplicate records for the same work.
3.11.3.3 Click on the title to modify the record and allow editing.
3.11.3.4 If the record is an LC one, it probably won't need any editing (check 020, 050, 300 fields).

3.11.3.5 If the record is Vendor "original" cataloging, then search OCLC connexion for matching records that are of better quality.

3.11.3.6 Add missing fields to Vendor record (e.g. extra 650, 700, 710, 711) thru copy and paste.

3.11.3.7 In the control tab, "000-6 Type of record" choose m-Computer file or any other type depending on what type you have in your hands instead of MARC Monograph.

3.11.3.8 In the Add Item Record choose:
Multimedia in Alma item type cells instead of Book.
Collection code should be changed to General Collection.

For example, the cataloger has added 245$h, 300$b and 500 from the OCLC record, and altered the leader accordingly (Enc-Lvl=4; Desc=a; File Type=i; Rec_Type=m;).

See result below:

- (Note: when upgrading a bib record for a book Enc_Lvl to [blank] i.e. full level is changed. In the case of multimedia, the cataloger has made Enc_Lvl=4 i.e. core level because the actual contents on the disc were not checked, only the container.)
- In the Add item box, Alma Item type should be changed to "Multimedia".
- Save and click "Return to search" and move on to next disk in hand.

Useful notes:

- Nearly all of them should be found in OCLC.
- Material type searching often don't have an ISBN.
- If there is no ISBN, use a combination of title and publisher/distributor to narrow down the search results.
- When other versions of the work are found (or other distributors, or other formats) this will give you the necessary 050, 100, 650, 700 could be used by copying them.

3.11.4 Maps and charts

3.11.4.1 Record of maps require you to login and from home-Cataloging-new record and insert all necessary information fields of the record(See 3.4 creating original MARC record), in addition to field 255(statement of scale) 300 for size and descript ,336,337,338 for description Item, 500 for more details about the scale and 942 for Alma item type –maps.

3.11.4.2 We can find examples of similar works that have already been catalogued.

3.11.4.3 In Alma you will find the ones that were done for example *"the Petroleum Economist and the UAE geological survey, etc."*

3.11.4.4 Many of the Petroleum Economist maps are later editions of titles we already have, so you could just copy and edit the Alma record from the old edition.

3.11.4.5 You can search for "cartographic material" in Modify title – title – keyword. Or "petroleum economist" or "British geological survey" in author browse, this will give you a good idea of what is already available in the collection.

3.11.4.6 Individual maps bought from vendors will probably be on OCLC if vendors don't supply the records.

3.11.4.7 As regards to LC map classification, a third cutter number after the date is added, It may help to browse thru the G section in the catalog using Call# browse in Lib-Hab for support.

LOCAL MAPS CLASSIFICATION

UAE G7570

Regions G7572	**Emirates G7573**	**Cities G7574**
.A18 Abu Musa	.A2 Abu Dhabi	.A2 Abu Dhabi
.A3 Abu Dhabi Island	.A4 Ajman	.A4 Ajman
.F2 Fakkan Bay	.D8 Dubai	.D8 Dubai
.T8 Tunb Islands	.F8 Fujairah	.F8 Fujairah
.Z2 Jabal Az Zannah (notice Library of Congress weird spelling for Jebel Dhanna)	.R3 Ras Al Khaimah	.J8 Jumairah
	.S5 Sharjah	.R3 Ras Al Khaimah
	.U4 Umm Al Quwain	.S5 Sharjah
		.U4 Umm Al Quwain

So all the city maps go in **G7574** and all the maps of individual Emirates go in **G7573.**

A map that covers Abu Dhabi city goes in **G7574** and a map covering Abu Dhabi, Al Ain, Ruwais and all the rest of the Emirate goes in **G7573**.

General UAE by subject G7571

+ Subject divisions. See thematic list below:

A	Special categories	J	Agriculture
B	Mathematic geography	K	Forests
C	Physical sciences	L	Aquatic
D	Biogeography	M	Manufacturing
E	Human and cultural	N	Technology and engineering
F	Political	P	Transportation and communication
G	Economic	Q	Commerce and trade. Finance
H	Mines and minerals (Use H8 for Petroleum and LNG)	R	Military
S	Historical		

3.11.5 Theses

No print theses will be added to the collection or Alma anymore. For any past printed thesis, these will be kept in the print collection in an enclosed room away from the general shelves.
The current policy at Khalifa University is to only house e-version in the Institutional Repository and ProQuest dissertations if it came from the KU graduate office, but for the donation ones "outside KU we will add it to the collation in Alma system.

3.11.5.1 The assigned librarian receives an email with the e-copy of theses from the Graduate Office occasionally.
3.11.5.2 The data is entered in the Institutional repository and made visible.
3.11.5.3 ProQuest is informed to upload the theses online (with a note mentioning: those theses should not be displayed online due to confidential data and patent rights).

3.11.6 Arabic titles

3.11.6.1 Search by ISBN or Title in Alma to check if there is a copy in the collection or not, if there is a copy, just add an item to the record.

3.11.6.2 If there is no copy in the system, almost Arabic books are needed to create new original record. First of all, understand subject heading and create call number (first section is classification number, second section is cutter numbers and date of publication) after that insert all necessary information fields of the record

020 : ISBN (9789984175348)
040 : Cataloging Source (R)
050 : Combine call number (DS247.T88 S53 2015)
100 : Personal name (منصوري، محمد)
245 : write title, subtitle and author (الشيخ زايد محطات وصور في الصحافة / اعداد محمد المنصوري ؛ جمعة الدرمكي)
250 : Edition (الطبعة الاولى)
260 : Place of Publication, Name of Publisher, date of Publication (أبوظبي :هيئة أبوظبي للسياحة والثقافة، دار الكتب الوطنية، 2015)
300 : (170 صفحة : مصور ؛48 سم)
336 : (2|نصrdacontent)
337 : (2|بدون وسيطrdamedia)
338 : (مجلد|bnc|2rdacarrier)
500 : If we have note (جزء من الكتاب يحتوي على نص باللغة الانجليزية)
504 : If we have Bibliographic (يحتوي على مراجع ببليوجرافية)
541 : Immediate source of acquisition note (معرض أبوظبي للكتاب 2016
650 : subject heading (الامارات العربية المتحدة-العلاقات الخارجية)
650 : subject heading (الامارات العربية المتحدة-أعمال مصورة)
650 : subject heading (الامارات العربية المتحدة-تاريخ-أعمال مصورة)
700 : If we have second author (درمكي، جمعة)

3.11.6.3 search in Search Resources by ISBN, Title or Subject is done.
3.11.6.4 Cataloging > Click " Search Resources "
3.11.6.5 Window Popup will open
3.11.6.6 Fill title or ISBN > Click Search >
3.11.6.7 Click on the Search button. Usually several results will be found. Open the physical book in your hand and look for the ISBN number, Edition, Publication year etc. from the book's front matter (copyright page), and match the closest MARC record from the list.
3.11.6.8 The author names should be in the fields starting at "100 1 - "and "700 1 -",
3.11.6.9 Publisher information will be against the fields starting "264" and the edition against "250 ".
3.11.6.10 ISBN number is against the field "020"

3.11.6.11 Select the best possible match, and click on the "Import" link, which will grab the data to the original window.

3.11.6.12 Results will be displayed > Click import

3.11.6.13 Back in the original window, select the type of resource (under framework).

3.11.6.14 Click on "Save". This will save a copy of the MARC record in Alma

3.11.6.15 If results are not found in Search Resources by title, ISBN or Author, Search by subject on the Internet or other libraries such as UAEU, ZU or the LIWA catalogue Emirates library. etc.

4. Physical processing of library material

4.1 Approved International vendors

Most library books are shelf ready through our suppliers. For non-processed books such as book fair purchased books and donations, the following basic steps are followed:

Requirement	Directions	Notes
Ownership stamp	Books are stamped on top of the book and main title page.	The top of the book and main title page are some of the most prominent parts of the book. Aside from ownership, distinction of material as Library or ILC is necessary.
RFID tag	The tags are attached inside the back cover of the book. The tags are recommended to be placed at random spots.	Random placing is recommended by RFID company for better book detection. Do not scan the RFID for book with the CD unless you complete processing the book and CD after that scan. If by mistake you did that, take the CD out, scan the book, erase the tag, place the CD inside the book and scan it again.

		Press ok. It will show 2 items.
Spine labels	Spine labels are normally attached to the spine of the book, half an inch from the base of the book's spine.  If the book is too thin, the label is attached in the cover on the bottom left portion, also with the half-inch allowance. A label protector is applied over the spine label afterwards.	The half-inch measure gap between bottom of spine label and base of book is YBP standard.
Barcode labels	Pre-printed barcode labels are attached to the books. For English books, the label is attached to the back of the book on the upper right corner. For Arabic books, the orientation is reversed so the label is attached on the upper left corner of the back of the book.	The top edge of the barcode labels should be within .5 - 1 cm of the top the book, the right also within .5 - 1 centimeter of edge or the crease of the cover. (Vendors standard?)

Reference Stickers	"Reference" Stickers are applied to the spine of the book it the book belongs to the Reference collection.	
Process	**Directions**	**Notes**
Books with CD's/DVDs	Attach Library property label to CD's/DVDs (to identify if material is Khalifa University Library materials or ILC material). Attach RFID CD/DVD tag over CD/DVD. Place CD/DVD in a CD/DVD drive to check if it works properly. Enter item record in Alma and put note – "CD/DVD checked – OK. Date – Name" ex. "CD/DVD checked – OK. July 25, 2015" Place an adhesive CD pocket at the back of the book. Insert CD inside pocket.	*TS should decide:* *For books with multiple copies in the Library and ILC, it is recommended to include the item number (number in the barcode label) to avoid misplacing CD's and DVD's.* *Item number can be written or printed as sticker.* *While putting the CD checked note, double check item information if correct.* *Normally the adhesive pocket is placed at the back of front cover. This is because it is easier for staff to check the*

	 Place a "CD Enclosed" label in the front cover (bottom right portion). The CD Enclosed label varies depending on the type and the number of CD/DVD materials enclosed.  	*CD/DVD/attachment from the front cover.* Labels are printed from Brother PTouch Label printer.
Books with maps, charts and other attachments	Place library ownership stamp at a conspicuous place in the map/chart, preferably near the corner margins. Staff may need to create a pocket for the map/chart if the book has none.	Book plate for donations?
Color Codes stickers for Special Collections "	"Color codes" stickers are applied on top of the book spine if the book belongs to the below collection. Green – Emirates collection Yellow – Medical Collection Purple – International Gray – Archive Orange – Popular Science Black – Children's Collection	

Book covers	Vendors books with jackets normally come with attached book jackets. In the rare event that the book jacket is not processed, fix the book jacket with book tape.	

4.2 Locally sourced/non-vendor items

The libraries process material purchased in this manner from scratch.

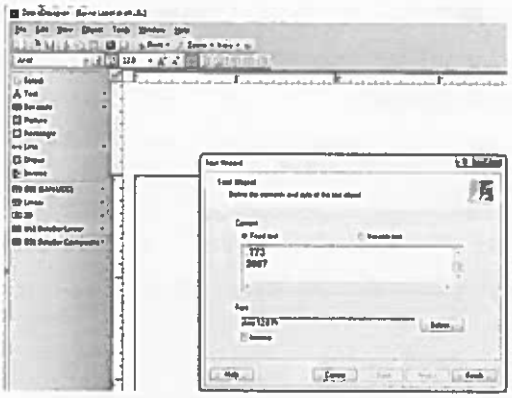
4.3 Labels for in-house printing

4.3.1 Call number printer

4.3.1.1 Copy the call no. from Alma (ILS)

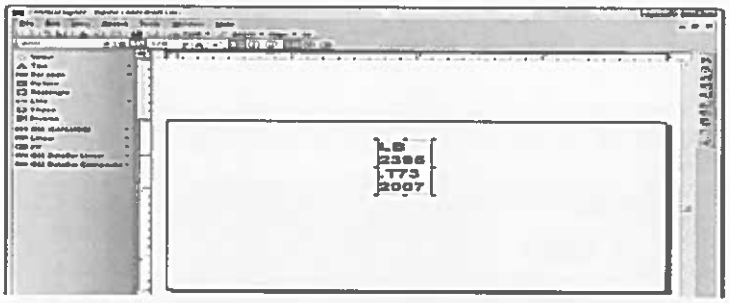
4.3.1.2 Paste it on to the printer

4.3.1.3 Organize and press finish

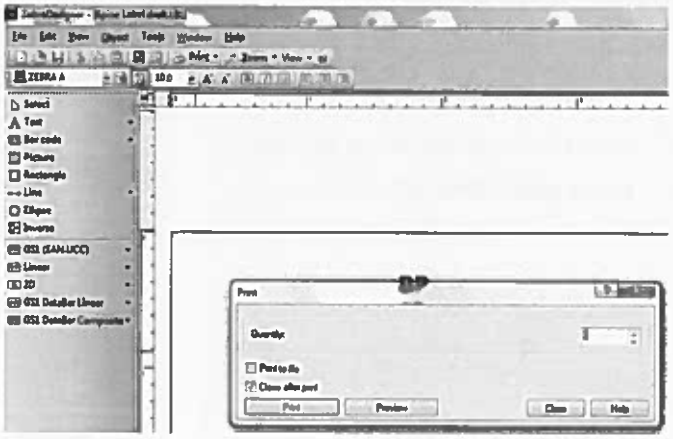


4.3.1.4 Choose: Font, size and space

Text Font: Arial
Text size: 12



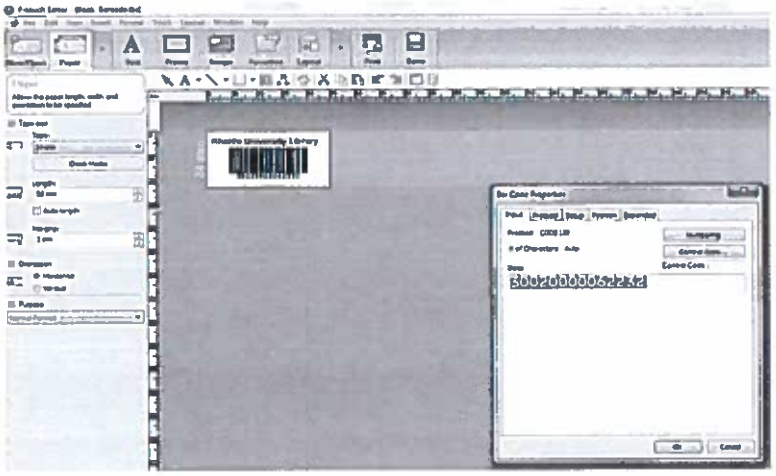
4.3.1.5 Press print (you can print more than one copy of the spine label).



4.3.2 In Barcode printer

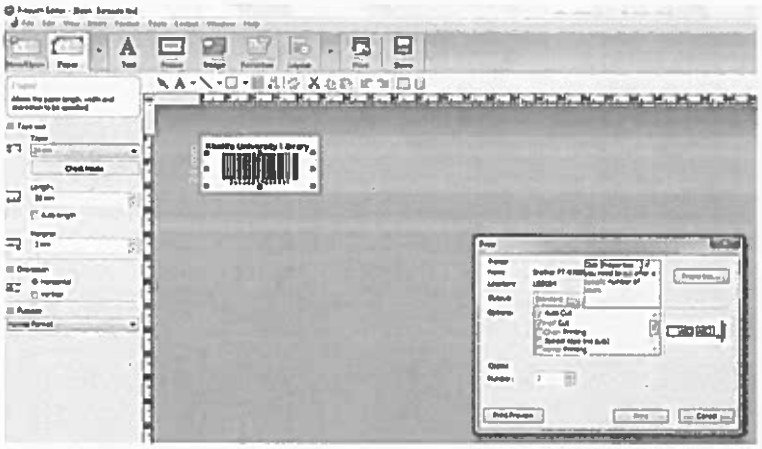
4.3.2.1 From library folder choose: Technical services – CAT-Forms Labels –Book Barcode.

4.3.2.2 Double click on the barcode



4.3.2.3 scan the barcode and press OK

4.3.2.4 press print from top-print



Tape size: 24 mm
Length: 50 mm
Margins: 1 mm
Orientation: Horizontal
Purpose: Normal format

- Way of Activating RFID for book with CD:

  Do not scan the RFID for book with the CD unless you complete processing the book and CD after that scan. If by mistake you did that, take the CD out, scan the book, erase the tag, place the CD inside the book and scan it again. Press ok. It will show 2 items.

4.4 Physical processing of maps

4.4.1 Folded maps are unfolded and flattened so that they can fit in the cabinets in the Map Room. Flat maps stay flat.

4.4.2 Barcode goes on back of sheet in top left corner.

4.4.3 RFID Labels goes on back of sheet in bottom right corner. The important thing is not to obscure any valuable info on the original map (it's not like a book dust jacket). If in doubt, see past practice and the Map Room.

4.4.4 When editing an item, change Alma Item Type to "Maps" and Collection code to "MAP ROOM".

5. Technical Services Action Slip

Public Services staff to fill in the cataloging slip and send to TS for any changes needed, taking into consideration the cataloguing policies.

6. **Transfer of books/collections between branches**
   To learn more about the role of cataloging services in the library collections transfer process, please refer to the Acquisition services procedures, and Public Services

7. **Dispose withdraw titles of library books from the library system.**
   The decision of the withdrawal//discard of materials from the library happens on an ongoing basis but in addition, an annual weeding is done in conjunction with inventory. Weeding or the withdrawal materials should meet at least one of the following criteria:
   1- Titles, which are more than ten years old.
   2- Item are badly damaged or worn.
   3- Titles that have been superseded.
   4- Too many copies are available.
   5- Book with inappropriate contents.

Action to dispose withdrawn titles of library books from the library system as follow:

1- Cataloging services will receive list of withdrawn **items** that contain titles, ISBN's and barcodes from representative of withdrawals.
2- Cataloging should compare items with the system to make sure that is the same one. If any items don't exist in the system then check with public services staff in the shelf.
3- From the barcodes, cataloging services will create list of bibliographic number.
4- From the biblionumbers create list for number of items in each biblionumbers.
5- Cataloging team will work on it as a batch "100,150 biblionumbers each time" for easy tracking if there was error in deleting bibliographic **records** from the system. In library system Alma, each bibliographic record can have one or more items attached, these items are sometimes referred to as holdings, each item includes information to the physical existing copy in the library.

   ***(Note:** you can't delete bibliographic record without deleting **all Holding and items** in that bibliographic records "holdings". Error in deleting the item records from bibliographic records comes because the item did not appear in the system/ No barcode exist in the system.)*

6- Delete biblionumbers if the number of items in biblionumbers is matches with the numbers of withdrawn/lost items.
7- All weeded out materials must be stamped with withdrawn.
8- Send materials for recycling or donation.

8. Steps of deleting the bibliographical records from library system:

Admin >Manage Sets >Add Set >Itemized

General Information

Set name * AH - 44GLA_del

Description Records to delete

Note

Set content type * All Titles

Set type Itemized

Private Yes No

Status Active Inactive

Creation date 29/01/2018 02.32.34 CST

Created by Ex Libris

Updated by Ex Libris

Content Origin Institution only

Set ID -

Add Contents from File to Set

File

The maximum file size is 10 MB

The input file should show the MMS ID in the first column

Delete.xlsx

Set "AH - 44GLA_del" was successfully saved. A job was submitted to add members to the set.

The set was created properly

Manage Sets

My Sets | Public Sets | All Sets

1 - 13 of 13 Name AH -

Add Set

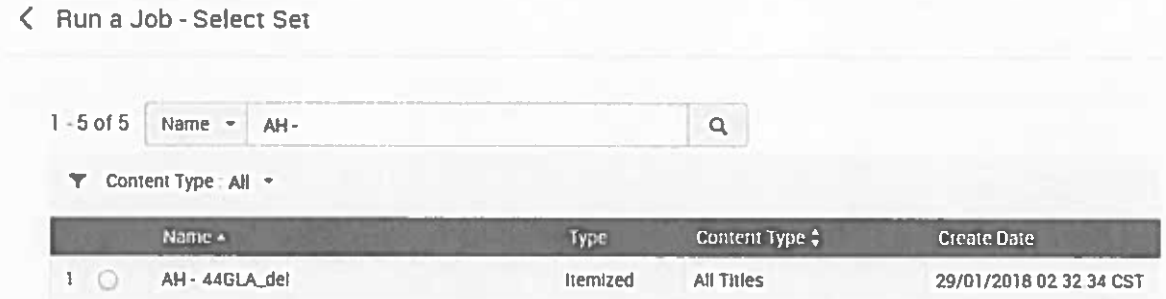
Content Type All

	Active	Name	Type	Content Type	Creation Date
1		AH - 44GLA_del	Itemized	All Titles	29/01/2018 02.32.34 CST

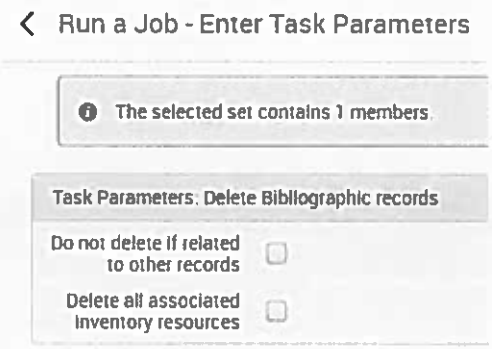
Looking at the "Members" of the set should show a list of the records for deletion

Now you can create the job >Admin >Manage jobs and sets >Run a job >Delete bibliographic records

Select the appropriate set



Select the relevant parameters



Click "Submit" and the job will run

Run a Job - Review and Confirm

1 2 3 4 Cancel Back Submit

General Information

Job Name: Delete Bibliographic records - AH - 44GLA_del - 29/01/2018 02.39.48 CST

Set Information

Set ID: 3310770140000561

Name: AH - 44GLA_del

Set Size: 1

Task Parameters Delete Bibliographic records

Do not delete if related to other records: false

Delete all associated inventory resources: false

API Information

In the job's history tab you can check afterwards if the job ran successfully
